

Assignment – 1

Subject: Fundamentals of Software Engineering (CEUC201)

Semester: 4th

Instructions:

1. Students must write the assignment in handwritten form.
2. Use of any AI-based tools for writing answers to the questions is strictly prohibited.
3. Direct copying or pasting from any source is not allowed.
4. Submission of this assignment is mandatory for all students.
5. The assignment questions must be answered in the context of your submitted SGP (Software Group Project) definition. All responses should be clearly related to your project definition.
6. If use of AI tools is detected, minus 5 (–5) marks will be considered.

Questions:

1. Does your project definition belong to the system level or application level? Provide sufficient justification for your answer.
2. If your project definition is at the application level, explain how it can be converted into a system-level project.
3. Describe the scope of the system in 5 to 10 sentences.
4. Describe the limitations of the system, mentioning at least four limitations.
5. Based on the defined scope, list at least 10 functional requirements of the system.
